

3 TRENDS IN RISK MANAGEMENT

DIGITAL FRAUD IN E-COMMERCE

Solutions such as Wirecard Trust Evaluation Suite enable all retailers to assess their customers and understand where their buyers come from and how they acted in previous transactions.

This allows e-commerce fraudsters to be identified at an early stage before the transactions are completed.

DIGITAL SECURE REMOTE PAYMENTS VIA TOKENISATION

Tokenisation involves the encryption of original card data according to PCI-DSS and is shared in the form of tokens in the case of a transaction. The source data remains in the secure data safe.

EMV TECHNOLOGY

Chip technology enables a secure payment process and short transaction time, making the payment process faster and more secure.
